

# Bell-Cohere Workshop

## 1. Download documents

Navigate to *Sources > My files*. Hit the checkbox of workshop guide: **Bell-Cohere Workshop Instruction.docx** and hit Download.

Alternatively, follow the link in notification banner and download from the github repo.

## 2. Building your Agent ✓

- 2.1 Hit  to expand the menu
- 2.2 Hit  **Agents** and hit “**+New agent**” to create a new Agent.
- 2.3 Name the Agent “RFP Proposal Drafter - [YourName]”
- 2.4 Add a description to your Agent: “Generates an Executive Summary based on an input RFP and historic response to RFP’s”
- 2.5 Paste the Custom instructions from the workshop guide for the Agent in the Custom instructions dialogue box

### *RFP Proposal Drafter Instructions*

```
# Role & Objective

You are the Lead Proposal Writer. Ingest the RFP document (or structured requirements) and write a highly compelling, factually accurate 3-paragraph Executive Summary. Ground your writing strictly in the facts and past winning projects stored in your connected [Library]. Do not hallucinate or extrapolate.

# Drafting Process

1. **Search [Library]:** Retrieve analogous past projects, standard delivery methodologies, and relevant performance metrics.

2. **Draft Paragraph 1 (Vision):** Summarize the client's current operational challenges and connect their goals to our proposed solution.

3. **Draft Paragraph 2 (Capability):** Detail our technical approach. Cite at least one real past project from the Library (e.g., **Similarly to our deployment for [Past Client Name]...**).

4. **Draft Paragraph 3 (Value):** Focus on direct operational value (e.g., network reliability, speed, or cost efficiency). Avoid software-only jargon like "technical debt".

5. **Human-in-the-Loop:** End with a 2-sentence "SME Review Note" asking the user to verify key assumptions.

---

⚠ **Human-in-the-Loop Verification Required**

**SME Review Note:** [Your 2-sentence query to the human reviewer]
```

- 2.6 Go to the “**Add tools**” section, Turn on the Document mode capability.
- 2.7 In the “**Add tools**” section, Click on **Sources**. Choose a Source by hitting the **Disabled** button, hit **Select Libraries**, and select the checkbox in the **Past RFP Library**

- 2.8 Click Publish changes to publish your agent.
- 2.9 Test the Agent: Click the + button. Add a file from My files. Choose “Sanderling Coast.pdf”
- 2.10 Prompt: “Draft an executive summary in response to this RFP based on the Library of past responses”. Check results.

### 3. Building your automation ✓

#### *Duplicate an Automation*

- 3.1 Hit  **Automations** Beta In the **Discovery** tab, in “**Shared with you**” section, Click on “**RFP Automation – Workshop version**”.
- 3.2 In the top right corner of the right-hand panel, click the 3-dot, click “**Duplicate**”,
- 3.3 In the **My builds** tab, open “RFP Automation – Workshop version”. In the top left corner, click to rename it “RFP Automation - [YourName]”

#### *Import and configure the Agent*

- 3.4 Click on the blue “+” on the Automation Canvas. Add the “RFP Proposal Drafter – [YourName]” Agent.
- 3.5 Connect the “**if**” output of BOTH “Conditional - NoGo Agent” and “Conditional - Review outcome” nodes to the input of the “RFP Proposal Drafter” Agent.
- 3.6 Paste in the prompt for the Agent in the **Configure** tab

*RFP Proposal Drafter*

```
Ensure you explicitly address the 'Key Deliverables' extracted in Step 1
{{ results.node-2cfd8wkb.output.text }}
```

#### *Configure pipeline output*

- 3.7 Click on the settings Cog icon  in the top right of the screen and configure the output template. Replace the connection [RFP Proposal Drafter] with the agent you created by typing “@RFP Proposal Drafter – [YourName]”

### 4. Testing your automation ✓

- 4.1 Click the Test button, Choose a file > Add from My files, choose one of these 2 input files:
  - Wrenfell Transit.pdf
  - Sanderling Coast.pdf
- 4.2 Click “Run Test”.
- 4.3 Close Test Panel
- 4.4 Click Publish. Add version notes. Click Publish. Exit Automation Builder

### 5. (Optional) Running your automation ✓

- 5.1 In Automation, Navigate to Discover.
- 5.2 Select your Automation
- 5.3 In the Right hand panel, Choose a file > Add from My files, choose one of these 2 input files:
  - Wrenfell Transit.pdf
  - Sanderling Coast.pdf
- 5.4 Click “Run”
- 5.5 Navigate to Runs to monitor the run and investigate the output.
